

Appendix C: Photographs

Site Photographs

Figure 1: View from the eastern boundary of the site looking westwards across the study site. Source (Belcher, 2021)

Figure 2: View of the dune slack wetland on site. Source (Belcher, 2021)

Figure 3: View of the dune slack wetland on site. Source (Belcher, 2021)

Figure 4: View of the invasive kikuyu grass that occurs through the centre of the site, along the sewer pipeline. Source (Belcher, 2021)

Figure 5: Residential Areas to north east (left) and north west (right) of the site. Source (MALA, 2021)

Figure 6: View of disturbed area of the site. Source (Bergwind Botanical Surveys and Tours, 2021)

Figure 7: Remnants of Atlantis Sand Fynbos as well as aggressive infestation by *Acacia saligna* (Port Jackson Willow). Source (Bergwind Botanical Surveys and Tours, 2021)

Figure 8: View of a few species representative of Atlantis Sand Fynbos, but no intact remnants of this vegetation persist in this area of the site. Source (Bergwind Botanical Surveys and Tours, 2021)

Figure 9: *Salvia lanceolata* in the foreground with other species, such as *Thamnochortus spicigerus*, making up Cape Flats Dune Strandveld. Source (Bergwind Botanical Surveys and Tours, 2021)

Figure 10: The mid-high, dark green shrubs are *Olea exasperata*, a typical species found in Cape Flats Dune Strandveld. Source (Bergwind Botanical Surveys and Tours, 2021)
